

PSPI – A Plan for The Development Of An Area Under Moratorium

Background

PSPI submitted a plan for the development of an area classified under moratorium covering 49.95 Ha. PSPI reported that the area was a plantation area, but there were errors during data input that resulted in the area classified as moratorium area. Based on that fact, PSPI asked APP and TFT to immediately verify the area to be mapped according to its actual condition. PSPI's plan to develop the area will be processed according to APP's procedure "Protocol for New Planting at the Concession of Forest Plantation after 31 January 2013".

Activity Phase

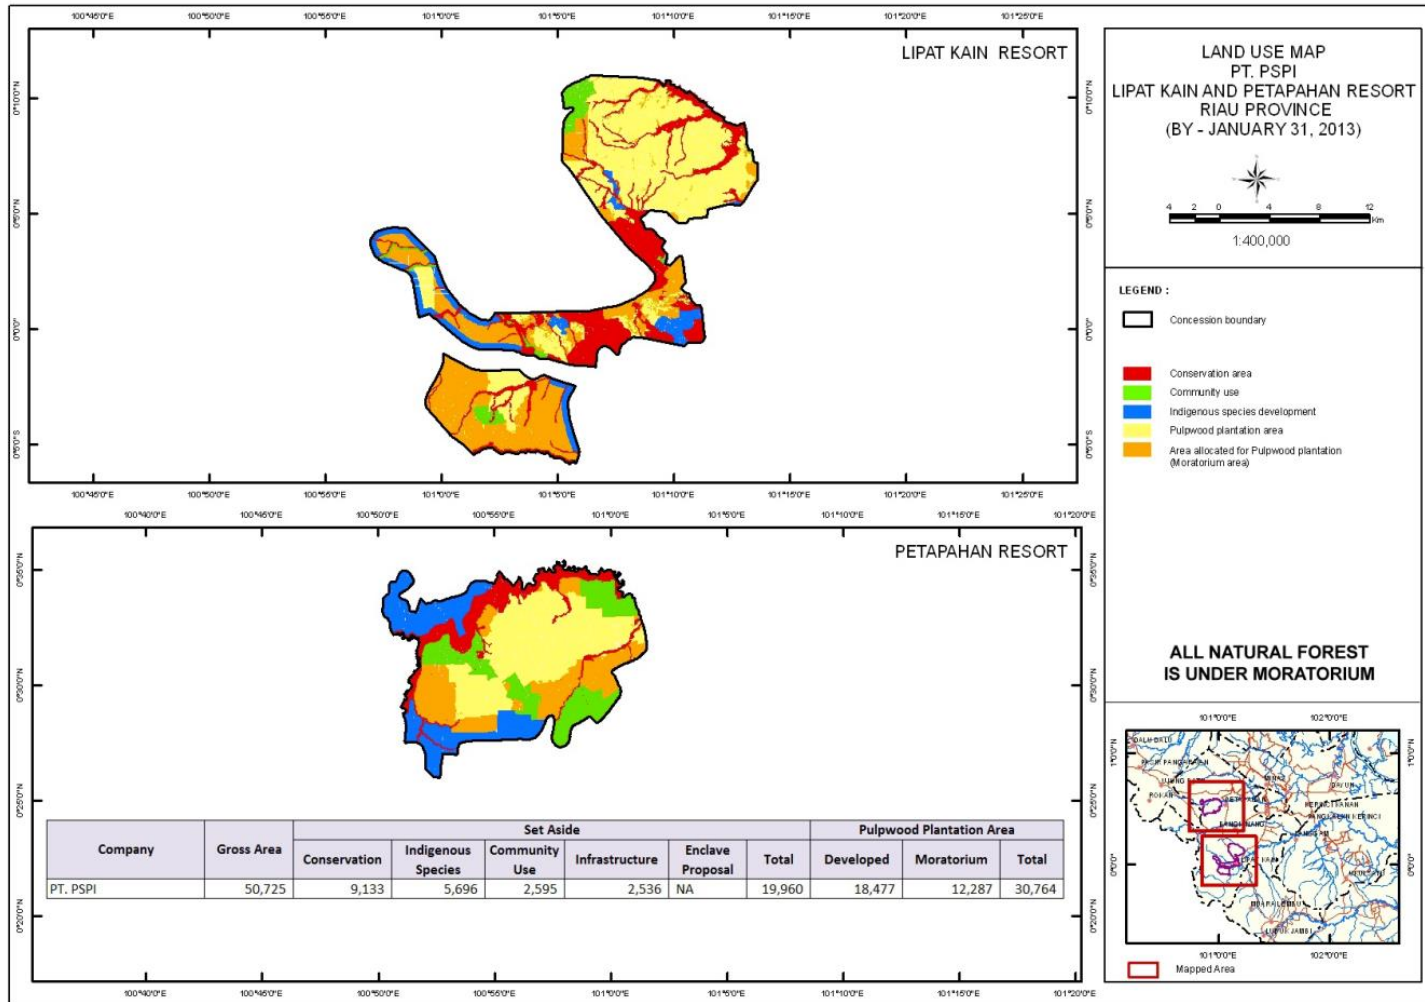

The area proposed for development was assessed according to relevant protocols. Based on the assessment results, the area is categorized as non HCV and non HCS area, and conflict mapping showed no history of land claims. Therefore, the next phase is to obtain approval from JSC (Joint Steering Committee), followed by an FPIC assessment in accordance with the relevant FPIC SOP.

Conclusion

Based on the "Protocol for New Planting at the Concession of Forest Plantation after 31 January 2013", the area that PSPI proposed to be developed has obtained an approval from the JSC to be developed, once FPIC is completed. Below is a map showing the previous and new spatial plan of the area:
